

Fence light

The fence light intensity changes with the voltage on the fence. The lower the voltage the lower the light intensity. It is installed between the earth and live wire to indicate the status and condition of the fence for peace of mind.

Features

- Indicates power on the fence for peace of mind
- No batteries required
- Uses minimal power from the fence
- The brightness of the LEDs will depend on the voltage on the fence. Only two of the four LEDs will illuminate if the fence voltage is low
- Highly visible LEDs allow for a 160-degree viewing angle. This allows the light to shine into the secure area only
- Can operate from 0.9kV to 12kV
- Can be used with most electric fence energizers
- Easy to installed between any earth and live wires

Specifications:

Material: Plastic and water tight compound

Steel wire connectors: Galvanised (Grey housing) or stainless steel (Black housing) option

Waterproof Housing IP66
